

Presented by [Jeremy Dann](#)

If you are not currently looking after ceiling and floor lifts in your CE department you may rethink your approach after this presentation. Included in this article is a video recording of the presentation.

**Original Webinar sponsored by Health Association Nova Scotia & ACCES,
November 9, 2011**

There is a growing body of evidence that indicates ceiling lifts are high risk devices that require careful attention to detail in the development and delivery of a comprehensive preventative maintenance and periodic inspection program. Health Association Nova Scotia's Clinical Engineering staff members will take you through the development of their testing program and professionally engineered lift load. The Association's CE service is now testing more than 2000 lifting devices annually. Real world experience and evidence will be presented surrounding the importance of routine testing and incoming inspections.

This presentation will focus in the following areas:

- Lift testing - why should I care?
- Standards and regulations
- Lift loads and test equipment
- Inspection results
- How are tracks installed?
- Why do we need better labels?
- Why do tracks fail inspections?
- Why do tracks and motors fall from the ceiling?

General Information

Webinar Name	Webinar ID
Ceiling lifts Lessons Learned	697847226
Actual Start Date & Time	Actual Duration (minutes)
Nov 09, 2011 01:46 PM AST	79

Clicked Registration Link (#)	Total Attendees (#)
102	40

Members of ACCES can download the video by [clicking here](#) but may need to install the [Go to Meeting Codec](#)

on your system to view it. The Goto Meeting Codec seems well suited to recording desktop sessions as the files are smaller than their equivalent Flash version and of better quality.

You can also watch video online clicking the play button  in the video box below.

You may also wish to make the video full screen by press this button  in the video box below.
